Customer Health Check – Performance

The Customer Health Check – Performance (CHC-P) is a performance-focused analytics dashboard providing real-time visibility into operational ticket metrics. It serves as a strategic tool for support managers, team leads, and leadership to monitor efficiency, SLA compliance, and overall team performance.

I. Business Perspective

The "Performance Visibility Gap" Challenge:
Without a consolidated view of support performance, organizations face risks that impact operational efficiency and customer experience:

- **Operational Inefficiency:** Difficulty in tracking ticket load, response, and resolution trends can lead to delayed handling and bottlenecks.
- **SLA Breaches:** Without visibility into First Reply Time (FRT) and Resolution Time (RT), teams may miss service-level commitments.
- **Team Performance Blindness:** Lack of insight into individual or team performance prevents proactive coaching and optimization.
- **Historical Trend Limitations:** Without comparing current performance against past benchmarks, planning for workload and capacity is challenging.

Strategic Impact & Decision Support:
The CHC-P transforms raw ticketing data into actionable performance insights to drive operational excellence:

- **Proactive Issue Resolution:** SLA breaches, delayed responses, and missed tickets are identified early for corrective action.
- **Resource Optimization:** Performance trends enable effective allocation of team capacity and workload balancing.
- **Team Performance Insights:** Provides clarity on agent efficiency, response times, and resolution effectiveness for coaching and improvement.
- **Continuous Improvement:** Historical data allows teams to identify bottlenecks and implement process enhancements.

II. Technical & Functional Perspective

Key Performance Indicators (KPIs):

Metrics are normalized to maintain clarity and confidentiality:

- **Tickets per Month:** Tracks monthly ticket volume to monitor operational load.
- **Total Tickets:** Provides an overall view of ticket demand.

- **First Reply Time (FRT):** Measures average time to first response, reflecting responsiveness.
- **Resolution Time (RT):** Tracks average time to fully resolve tickets, reflecting operational efficiency.
- **Customer Satisfaction (CSAT):** Aggregated satisfaction score from customer feedback.
- **Missed TRO:** Tickets that breached SLA or missed resolution targets.

Operational Features & Architecture:

- **Multi-Timeframe Analysis:** Combines live, snapshot, and historical views to track trends and performance evolution.
- **Data Governance:** Ensures all metrics are accurate, validated, and updated via SQL and Power BI pipelines.
- **Drill-Down Capabilities:** Allows management to examine performance at agent, team, or account levels for root cause analysis.
- **Predictive Insights:** Forecasts potential SLA risks or operational bottlenecks based on historical trends.

III. Conclusion: Driving Proactive Performance Management

The Customer Health Check – Performance dashboard empowers teams to shift from reactive ticket management to proactive operational performance management. By bridging the performance visibility gap, CHC-P improves efficiency, SLA adherence, and overall team productivity.

Key outcomes of CHC-P implementation include:

- **Enhanced Operational Visibility:** Real-time monitoring of tickets, response times, and SLA adherence improves oversight.
- **Improved Team Efficiency:** Tracking performance metrics supports proactive coaching and workload balancing.
- **Proactive Performance Management:** Early identification of delays or bottlenecks ensures timely corrective actions.
- **Data-Driven Decision Making:** Leadership can prioritize resources and focus on high-impact areas based on metrics and trends.
- **Predictable Support Performance:** Using historical and current trends, organizations can forecast operational needs and improve overall efficiency.

Ultimately, CHC-P provides the analytical rigor necessary to optimize team performance, enhance SLA compliance, and drive sustainable operational excellence.
